GAMMA SPECTROMETRY KIT WITH 1.5" SCINTILLATOR

## GSB Gammaspectacular Bundle

The gammaspectacular kits come with everything you need for gamma spectrometry, spectrometer, detector, choice of software, manual and instrument case.

These kits are suitable for educators, students, amateurs and professionals who work with low level radioactive sources.

With this kit you can perform a range of fascinating experiments involving the atomic nucleus, such as gamma emission, Compton scatter, positron annihilation etc..

## Fun Discovering Nuclear Physics

Anyone with interest in learning or teaching physics must at one point have wanted their own counting lab, but until now, the price tag for a spectroscopy set has made it almost impossible, therefore we present our range of affordable MCA Systems, perfect for science industry and education.

## Student Discounts

We gladly offer full time students and amateur fusioners a once off A\$50 student discount, the discount is a self serve, honour system, so if you are very young or very old, and don't have a full time job or lot's of money, you simply type the word "student" into the coupon code field when you place your order. \* To redeem a student discount, it is necessary to first create an account and log on.

## Educational Institutions

Talk to us about classroom bulk purchases, why share one spectroscopy system per class, when you can have one for every lab bench. We can provide formal quotations by request and are happy to cooperate with government or institutional procurement teams.
